

Model New Org Charts in Minutes with **Ingentis® org.manager® for SAP® SuccessFactors® Solutions**

Create Simulations Using Data from SAP SuccessFactors Solutions

Org Charts from SAP® SuccessFactors® Solutions on SAP Business Technology Platform

The challenges of visualizing organizational structures are continuously increasing. Two indispensable requirements for org chart tools are the unlimited configuration of content as well as the availability of an attractive and modern visual format. Thanks to its preeminent features, Ingentis® org.manager® for SAP® SuccessFactors® solutions fulfills these and many more expectations. In addition, it smoothly integrates with the SAP SuccessFactors Employee Central solution.

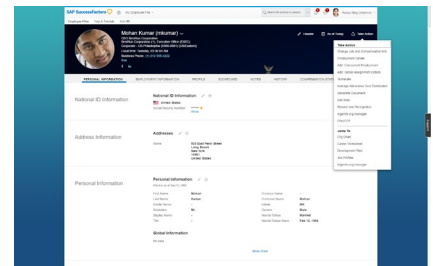

Effortless Integration

Running on SAP Business Technology Platform, Ingentis org.manager for SAP SuccessFactors solutions can conveniently launch directly through the SAP SuccessFactors solutions user interface, including single sign-on. Users can select themselves or any colleague using SAP SuccessFactors solutions to directly access the org chart at the respective position. In seconds, the org chart visually displays any kind of structure (for example, an organization view including all relevant persons).

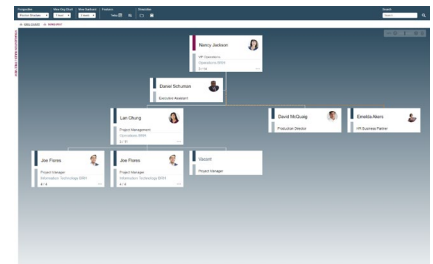

Flexible Structures

With Ingentis org.manager for SAP SuccessFactors solutions, you can visualize any structure maintained in SAP SuccessFactors solutions. These structures include all objects (such as legal entity, business unit, division, department, location, and cost center), individual metadata framework objects, and all relations. Aside from legal relations, you can also visualize functional relationships by using dotted lines, for example.

Integration with SAP SuccessFactors Solutions

Flexible Org Chart Modeling

Individual Design

With comprehensive setup possibilities, you can edit the content and design of your org chart to offer several options and adjust to changing requirements. Animations let you visualize the navigation across the org chart, and individual boxes display diverse data with one mouse click. In addition, visualization rules let you edit the org chart’s display during runtime to focus on particular aspects, such as whether it should display certain positions or emphasize employees with particular qualifications. To optimize available space, the content of the boxes adjusts to the zoom level.

Simulations

The tool lets you simulate multiple plan versions and scenarios directly in the existing org chart. You can create simulations in a powerful, user-friendly manner – restructuring with drag and drop, creating and removing departments, employees, or vacancies, and editing attributes.

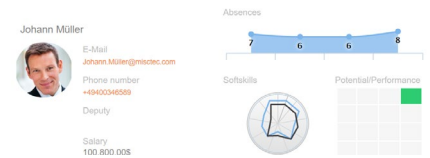

Reorganizations can turn into lengthy processes. With the help of data updates, you can adjust existing simulations to changes (such as new objects) from SAP SuccessFactors solutions at any time. A validation process then checks if the simulations are possible based on the updated data. If this is not the case (for example, a position was moved to a department that no longer exists in SAP SuccessFactors solutions), you are asked to make amendments.

The comparison of data sets enables a detailed overview of the simulation for any desired key date. You can also easily check and transfer structural changes to SAP SuccessFactors solutions in a manual or semiautomated way.
